Overview

- The Mathematics CCSS are CT Standards
- The Standards are rigorous, coherent and focused
- The Standards require a paradigm shift in instruction
- The Standards are not curriculum
- Revised curriculum should be implemented by 2013-14
- Effective implementation requires effective, focused PD
The CCSS, adopted by the State Board on July 7, 2010,

- are internationally benchmarked
- prepare all students to succeed in a global economy
- support the State Board’s 5-Year Plan
- support Connecticut’s Secondary School Reform (P.A.10-111)
The New CT Standards for Mathematics

- The Standards are rigorous, coherent and focused
  - Teach more of less

- The Standards require a paradigm shift in instruction
  - Teach more of less well enough for students to learn and be able to apply

- The Mathematics Standards are comprised of content standards and standards for mathematical practice
The K-12 Standards for Mathematical Practice (SMP) describe varieties of expertise that mathematics educators at all levels should seek to develop in their students.

- Teachers’ role
- Students’ role

These practices are not new, they rest on important “processes and proficiencies” with longstanding importance in mathematics education.

SMP will be assessed.
Standards for Mathematical Practice

- The SMP are located in the front of the mathematics standards and within the “nature of mathematics” section at each grade level.

- The SMP illustrate the connection between 21st century skills and mathematical content and instruction.

- The SMP should be considered when creating curricula, assessments, and professional development for teachers, and administrators.
Grouping the practice standards

1. Make sense of problems and persevere in solving them.
2. Reason abstractly and quantitatively.
3. Construct viable arguments and critique the reasoning of others.
4. Model with mathematics.
5. Use appropriate tools strategically.
6. Attend to precision.
7. Look for and make use of structure.
8. Look for and express regularity in repeated reasoning.

Reasoning and explaining
Modeling and using tools
Seeing structure and generalizing
**Organization of the Standards**

**Practice Standards**
- Based on NCTM Process Standards & and National Research Council.

**Mathematics Standards**
- **Practice Standards**
  - Based on NCTM Process Standards & National Research Council.
  - The variety of:
  - Processes, proficiencies and expertise students should develop

- **Content Standards**
  - Concepts and skills by grade level & domain or conceptual categories.

**Practice Standards**
- Make sense of problems and persevere in solving them
- Reason abstractly and quantitatively
- Construct viable arguments and critique the reasoning of others
- Model with mathematics
- Use appropriate tools strategically
- Attend to precision
- Look for and make use of structure
- Look for and express regularity in repeated reasoning

**Content Standards**
- Clear & specific.
- Cannot be met without the engagement of Practice Standards.

**Practice Standards**
- Present throughout Content Standards. The “flexible thinking work”.

**Content Standards**
- A balanced combination of procedures & understanding
- Students who lack deep understanding of concepts:
  - Rely too heavily on procedures
  - Lack the foundation to do the “flexible” thinking needed in the mathematical processes (Practice Standards)

**UNDERSTAND**
- (know)
- Understand and be able to do
Key Points about the Content Standards

- The standards stress not only procedural skill but also conceptual understanding, to make sure students are learning and absorbing the critical information they need to succeed at higher levels rather than the current practices by which many students learn enough to get by on the next test, but forget it shortly thereafter, only to review again the following year.

- The K-5 standards provide students with a solid foundation in whole numbers, addition, subtraction, multiplication, division, fractions and decimals—which help young students build the foundation to successfully apply more demanding math concepts and procedures, and move into applications.

www.corestandards.org
Key Points about the Content Standards

- The middle school standards are robust and provide a coherent and rich preparation for high school mathematics. Students who have completed 7th grade and mastered the content and skills through the 7th grade will be well-prepared for algebra in grade 8.

Key Points about the Content Standards

- The high school standards set a rigorous definition of college and career readiness, by helping students develop a depth of understanding and ability to apply mathematics to novel situations, as college students and employees regularly do.

- The high school standards emphasize mathematical modeling, the use of mathematics and statistics to analyze empirical situations,

- The high school standards call on students to practice applying mathematical ways of thinking to real world issues and challenges; they prepare students to think and reason mathematically.

Implications for Instruction

Changes in Practice
Changes in Focus
Changes in Emphasis
"If you try to introduce people to a paradigm shift, they will hear what you have to say and then interpret your words in terms of their old paradigm. What does not fit, they will not hear. Therefore, a change in paradigm cannot be brought about by talking. People have to experience the change, or at a minimum see other people experiencing it, before they will begin to understand what you are saying."

(Myron Tribus - 2001)
Shifting Mathematics Standards

**Probability**: Not mentioned until 7th grade, previously began in K. It appears briefly in grade 6, but the focus on actual probability is not until grade 7 because it is important to understand fractions and percents prior to teaching probability.

**Money**: Not mentioned until 2nd grade, previously began in K. The focus is instead on building number concepts and skills (such as skip counting) in K and 1st grade as a foundation for money in 2nd.

**Fractions**: Concentrated in a three grades: 3rd – 5th. Relies on a solid foundation in whole numbers rather than teaching the two in tandem as we have done in the past.

**Patterns**: De-emphasized in favor of a stronger foundation in place value & number.

Concepts are focused and do not recur unless in a new context. The goal is to commit more time to mastering a concept and less time to re-teaching.
Critical Areas of Focus

Each grade level section of the Common Core contains Critical Areas of Focus

A description of the key areas where instruction and learning time should be focused.

Mathematics | Kindergarten

In Kindergarten, instructional time should focus on two critical areas: (1) representing, relating, and operating on whole numbers, initially with sets of objects; (2) describing shapes and space. More learning time in Kindergarten should be devoted to number than to other topics.

(1) Students use numbers, including written numerals, to represent quantities and to solve quantitative problems, such as counting objects in a set; counting out a given number of objects; comparing sets or numerals; and modeling simple joining and separating situations with sets of objects, or eventually with equations such as $5 + 2 = 7$ and $7 - 2 = 5$. (Kindergarten students should see addition and subtraction equations, and student writing of equations in kindergarten is encouraged, but it is not required.) Students choose, combine, and apply effective strategies for answering quantitative questions, including quickly recognizing the cardinalities of small sets of objects, counting and producing sets of given sizes, counting the number of objects in combined sets, or counting the number of objects that remain in a set after some are taken away.

(2) Students describe their physical world using geometric ideas (e.g., shape, orientation, spatial relations) and vocabulary. They identify, name, and describe basic two-dimensional shapes, such as squares, triangles, circles, rectangles, and hexagons, presented in a variety of ways (e.g., with different sizes and orientations), as well as three-dimensional shapes such as cubes, cones, cylinders, and spheres. They use basic shapes and spatial reasoning to model objects in their environment and to construct more complex shapes.

Implications for Implementation

Connections to other initiatives and practice

Transition timeline
DISTRICT IMPLEMENTATION GUIDE
(Use blue arrows to navigate timeline)

ASSESSMENT

- Created governance structure and established Technical Advisory Committee and 10 Work Groups
- Develop formative tools to support states in implementation of CCSS and specifications for summative and interim assessments
- Develop items for summative and interim assessments and make pool of interim items available to states
- Complete pilot-testing of summative items

2014-2015
Grades 3-8 and 11 CCSS-based summative assessment administered

Fall 2010
- Crosswalks illustrate correlation among Connecticut standards, CCSS, CMT and CAPT

Winter & Spring 2011
- Curriculum frames provide districts a foundation to design K-12 Mathematics and English Language Arts curriculum based on Rigorous Curriculum Design model

Summer 2011
- K-12 district curriculum revisions begin and continue throughout school year

School year 2011-2012
- Districts begin to implement CCSS-based curriculum for selected levels and courses

K-12 district curricula based on CCSS fully implemented

CURRICULUM
Considerations for Districts

- 2011-12- eighth graders will take 2014 CAPT and 2015 CCSS assessment

- 2011-12 kindergarteners will never take the CMT

- 2013-14- K-12 district curriculum should be fully implemented

- 2014-15- CCSS- based assessments administered in grades 3-8 and 11
Considerations for Districts

- Districts need to compare current curriculum to CCSS.
- Much will stay the same.
- Some CCSS concepts/skills will need to be added, and some current standards moved to a different grade.
- Current instructional materials will need to be supplemented, enhanced or moved to a different grade.
Next Steps for Districts

➢ Use the Crosswalks! www.sde.ct.gov

➢ Become familiar w/standards content
➢ Examine district curriculum
➢ Make decisions about test correlation

➢ Balance of literature and literary non-fiction (K-5)
➢ Literacy as part of science and social studies/history; informational text as part of ELA (6-12)
➢ Work on intentional inclusion of the CCSS Standards for Mathematical Practice at every grade level.
